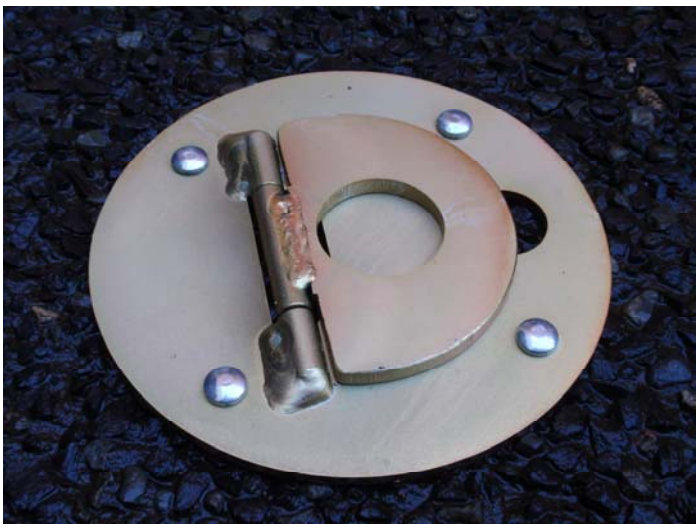
ANKA-LOOP

BICYCLE AND EQUIPMENT SECURITY
"FLOOR ANCHOR"

Cable lock not included.

Ideal security for Bicycles, Motorcycles,
Quad Bikes, Tinnies, Trailers, Generators
Welders, Compressors & Ride on Lawn Mowers.

The ANKA-LOOP has been designed from a combination of great success with our XTRA-LOK (Roller Door Lock), and the LOK-LOOP (Motorcycle & Equipment Anchor). The combination of the two products gives the anchoring properties of the LOK-LOOP, & the lay flat & flush properties of the XTRA-LOK.



The ANKA-LOOP is made of a 4mm steel base plate, a 10mm hinge, with a Stainless Steel hinge pin for strength and durability. The hinged lug is 6mm steel, with a 36mm aperture for a chain or cable lock (ideal with our Alarmed Cable Lock). The fixing pins are 50mm long, hardened and tamper resistant. Each fastener has superior pull out strength to a 10mm sleeve anchor. These are the same fasteners we use on our Roller Door Locks. Testament to the strength of the fasteners, are the numerous doors that have withstood ram-raids.

The ANKA-LOOP comes with tamper resistant concrete fixings & instructions.
It is only 10mm high when not in use.
