

“STOP”

Don't let the Roller Door be the weak point in your security.

XTRA-LOK's saved the day stopping an attempted ram-raid

- XTRA-LOK, a dead lock for your Roller door.
- Secures the door to the concrete with a simple latching technique taking seconds.
- Lays flat, with minimum obstruction when the door is open.
- Stop Break-Ins through the roller door, or goods being loaded out through your door, when a break-in occurs else where eg. a window or access door.
- In domestic situations XTRA-LOK's stop a car being driven out, or a motorcycle being stolen.
- Also of great assistance in high wind areas, to help stop the door blowing in or being sucked out.

Roller Door Security Latch
External XTRA-LOK

Some commercial doors lock only by the chain, leaving the door to be easily jimmied up. Others have slide bolts that are still very inadequate.

Domestic Roller Doors are easily broken into in seconds, night or day and often the garage has an internal access door to the house.

Double installation of XTRA-LOK's (as in the adjacent photo) have saved numerous ram-raids & break-ins, saving both insurer & business owners alike. While one XTRA-LOK in the centre of a standard 2.4m domestic roller door is usually sufficient.

Roller Door Security Latch
Internal XTRA-LOK

The XTRA-LOK's are made of solid steel treated with zinc, and a stainless steel hinge pin. They are supplied with 4 hardened tamperproof concrete fasteners, and 4 cup head bolts

We have a model to suit all applications, they also fit tilt doors & panel lift doors.

Available from selected roller door installers / repairers & from all Locksmiths Australia wide & New Zealand. For your nearest stockist please phone, or email us your location.
